## RESEARCH PROJECTS

---

MS THESIS Jan 2018 to Present	<b>Spectral Hypergraph Theory</b> Guide : <a href="#">Prof. Balaraman Ravindran</a> , <a href="#">Prof. Shankar Narasimhan</a> Utilizing the Laplacian spectrum of hypergraphs represented using tensors for various learning tasks such as hypergraph partitioning, hyperedge prediction, and graph isomorphism. The preliminary version of first two works are accepted in workshops held at <a href="#">NeurIPS 2019</a> , <a href="#">KDD 2019</a> and the extended version is under review.
M.TECH THESIS June 2015 to May 2016	<b>Identification of Linear Dynamic Systems using Dynamic Iterative PCA</b> Guide : <a href="#">Prof. Arun K. Tangirala</a> , <a href="#">Prof. Shankar Narasimhan</a> The work is concerned with identifying linear dynamic models from data that have errors in both outputs and inputs, popularly known as errors-in-variables (EIV) problem. We developed a novel approach in the principal component analysis framework which provides unbiased model with minimal user intervention. The work is published and can be found <a href="#">here</a> .
